

2nd Global Summit Blockchain Technology

- Opportunities and Challenges for Indian Economy -
Friday, 21st April, 2017 Bengaluru, India

The paradigm shift in the financial infrastructure based on underlying Blockchain Technology is gaining momentum. The distributed ledger technology is widely accepted irrespective of the nature of business or industry to securely move an asset between peers across private and public networks. This has brought a transformational, high degree of change impact in the lives of billions of people around the world. Since the response to any technological advancement is promptly reflected both as a tool to promote development and also as a means of socio-economic criminal activities, hence the impact of such advanced technological implementation should be addressed two fold i.e. in terms of opportunities and challenges.

The adoption of Blockchain Technology in India is at a nascent stage and therefore requires an enhanced level of understanding about its applications, ethical, legal, and regulatory issues. This calls the Blockchain Technology stakeholders such as technology developers & users, investors, government and regulatory authorities to discuss the relevant issues. This will help determine the protected decision of investors to invest, regulators to stress upon control and other stakeholder to fair play towards the future growth of Blockchain Technology in India.

Therefore, with an objective to provide the impetus towards accelerating the adoption of effective, efficient, and innovative Blockchain Technology in all possible classes and verticals of the organizations and thereby creating a conducive environment for its fairly growth and development in India, The ASSOCHAM is organising **2nd Global Summit on "Blockchain Technology" on Friday, the 21st April, 2017 in Bengaluru, India.**
