

What is ERP?

Enterprise Resource Planning system is a fully integrated business management system covering functional areas of an enterprise like Logistics, Production, Finance, Accounting, Sales and Human resources etc. It organizes and integrates Operation processes and information flows to make optimum use of resources such as men, material, money and machine. ERP is a global, tightly integrated closed loop business solution package and is multifaceted

ERP promises one database, one application and one user interface for the entire enterprise.

ERP system enhances a manufacturer ability to accurately schedule production, fully utilize capacity, reduce inventory, and meet promised shipping dates.

Information is integrated within an organization using an ERP system

SAP-ERP

SAP AG has developed ERP package called SAP

SAP stands for Systems, Applications and Products in data processing.

SAP looked at the entire business as a single entity while developing this software Therefore, SAP is a unique system that supports nearly all areas of business on a global scale.

SAP has a number of Application Modules in the package.

Some of these modules are

1. Financial
2. Controlling
3. Investment management
4. Treasury
5. Integrated enterprise management
6. Sales and distribution
7. Production planning and control
8. Material management
9. Human resource management
10. Internet and intranet.

What is Conventional Application Packages?

Conventional Application Package Can Handle only one Functional Area of The Company.
Ex: - Accounting package covers accounting functional areas of the enterprise.

Difference between Accounting package and SAP-ERP package

Accounting package handles only individual business functions of accounts

ERP package handles the entire range of business functions of The Company.
