

Simple Study Flowchart

1. *Schedule* the study in brief assigning reasonable time to chapters.
2. Gather all required *Study Materials*.
3. Determine the *Scope* of chapter before starting it.
4. Make the Scope of chapter *Simple, Short & Specific* (Conclusive) only after studying it deeply.
5. Do *Immediate -Revision* after chapter end & *Gap -Revision* after some time.
6. While doing all this very important thing is have *Practical Approach* with, as only then it will be really meaningful & profitable.

Everybody go through like this in some or other way but it may lose/ forget something every time due to our study mood. I hope this chart will help to those moody students like me.
