An Idea about Learning Graph

In the above graph we measure time on the horizontal axis and level of learning on the vertical axis.

It is generally seen that when we learn any topic its learning level is 100%. From that instance it starts to fall. To prevent this revise the topic once again within 24 hour. The level also starts to fall to prevent it again revise it once again within 7 days. It also falls.

To prevent it finally revise once again within 30 days. It's final deal. Now not require to worry about that chapter.

The following is the summary

Topic's name	Date of Study	Next time(24 hrs)	Next revision(7 days)	Final Revi(30 days)
