The mail which we have received from the ACES system contains the TPIN and Password and with the help of that TPIN link we have successfully generated our own user ID and password. Now it's time to do act online like: view case portfolio, file the refund, complete/amend/surrender the registration certificate i.e. ST-2, file the ST-3 online as well as through excel utility and also you can get the help at every point.

As we were talking about the word automation, means everything is automatic and available at your own place or we can say that the automation is like DTH service (Direct to Home). From application for registration to filing of return is now available at your own place, you need not worried about to send a hand written application or form or

return and even you need not think about to whom it is concerned. Everything will be soft, nothing hard (Except some evidences or proofs).

In our first part of article we have explained the preliminary provisions relating to online registration with ACES system. As explained we have successfully registered with ACES and now it's time to cover machinery provisions of the ACES system. In this article we are describing all the features of Service Tax section like: filing of ST-1, getting of ST-2 and filing of ST-3. Again, as it is not possible to compile all the things in one article, we will give details for filing ER-1 return other returns in our next articles on the same issues at the earliest.
