

Dear CA Students,

Most of our CA students' problem is lack of sufficient time to revise the studied lessons.

The First time study should be in depth. While doing this first time study you may adopt the following techniques and concentrate on the revisions as narrated.

- 1) Writing down important points
- 2) Drawing diagrams to understand the confusing concepts
- 3) Linking the subject with events happening around you . This is the best method to remember the things without any pain in your brain. For this you can use any picture, story etc.,
- 4) Whatever studied that day should be given a glance while going to bed so that the studied matters will be sealed in your memory.
- 5) Within 3 days of your first study you have to revise the notes . This will ensure that you would become master of that topic. If you do not do this when you study after a long time the same subject may seem to be very new to you and it would consume more time.
- 6) The relevant case laws and sections should be linked with some memory techniques and memorized. Just mugging up won't remain long in your brain.
- 7) Whatever you have planned that day should be finished that day itself at any cost. If you postpone it would reduce your confidence and will power. Know your strength and plan.
- 8) Use different colors of pen to mark important points on the materials so that particular colored points can be revised quickly for quick revisions.
- 9) Try to finish the first revision within 3 months time. In between as explained the day glance and 3 days after revision should be done.
- 10) After the 2nd revision after 3rd day the next revision should be planned on the 10th day of the 1st revision.
- 11) After 3rd month, start your 4th revision with full confidence. Within a month you have to finish the 4th revision.

12) Then the left out days spend to test your knowledge and excel in the topics.

With the above techniques of learning hope you can clear the CA in the first attempt itself.

Last but very important

- Stop seeing TV serials and movies, Face book , Internet surfing , trying to teach others without finishing your studies .
- Refresh yourself doing some free hand exercises, eating good food (not junk food), do some yoga techniques for concentration and health and doing stretch exercises. Just 20 minutes you can allocate in a day for this. Not more than that.
- In the yoga, doing alternate breathing technique will greatly improve your concentration and help to use the right and left brain in a balanced way. So that learning will be interest with the help of right brain for creativity and left brain for hard work. This breathing technique you can do 5 times for every one hour. So that your brain will get refreshed. For this technique you can visit the website <http://yogikrishna.blogspot.com/>
